Art Unit: 1723

#### **DETAILED ACTION**

#### Claim Objections

- 1. Claim 5 is objected to because of the following:
- In line 3, "the" or "said" is missing before "seal".

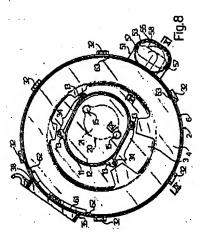

Appropriate correction is required.

#### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

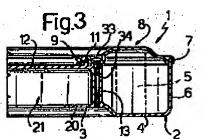

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-4 and 12-13 are rejected under 35 U.S.C. 102(b) as being anticipated by GB

2,079,178. 178 teaches a filter comprising end caps (8, 2) and an axial flow opening 21 (the axis of filter 1 passes therethrough).

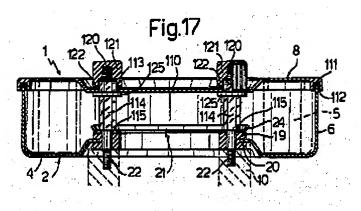

An annular filter 5 is positioned between the end caps and

defines a hollow interior communicating with the opening. At least one column

Art Unit: 1723

13 (four) extends through the hollow interior and between the caps and are laterally spaced

from the opening 21 (none of the columns circumscribe the opening) but are hollow for receiving posts (33 114) therethrough to supply a compressive force on the end caps [as in claims 1-2 and 13]. No liners are taught by '178 [as

in claim 3] and 10 can be considered the base adjacent the second end cap 2, wherein the posts extend axially to the first end cap 8, releasably mounted thereto for applying compression [as in claim 4]. An O-seal 19 is also provided sealing the end cap to the base (10) [as in claim 12].

## Claim Rejections - 35 USC § 103

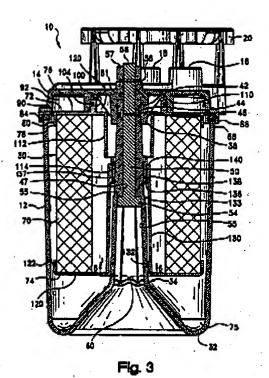

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1723

5. Claims 5-11, 14-17 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over '178 in view of Clausen et al. (U.S. 5,753,120). '178 was expanded above. Clausen

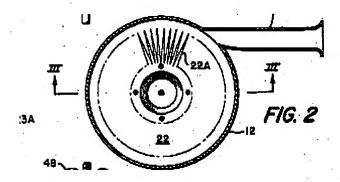

integrally formed sleeve telescopically received within a sleeve 38 integrally formed with the upper "end cap" 14 in sealing relation by a sealing bead including o-ring 46 and flange depending from and integral with the bottom sleeve [as in claims 5-10, 14-16 and 19]. The upper sleeve includes a stop (42, 44) [as in claims 11 and 17]. It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention to have the sleeve

configuration of Clausen for each of the columns 13 of '178, since Clausen teaches the benefits of being simple to design; easy to assemble; and provides ready and easy accessibility to a spent filter element (col., lines 45-50).

6. Claims 18 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over '178 in view of ordinary skill in the art or in view of Miskiewicz (U.S. 3,898,066). Claims 18 and 20 require the hollow interior of the filter element and the axial flow opening in the second end cap to be in axial alignment. Firstly, it is contended that such is within ordinary skill since the precise position of the opening in the end cap would be obvious depending upon the structure of

Art Unit: 1723

the base upon which the filter is to be mounted. Secondly, such a configuration is known in the art of Miskiewicz.

It is considered that it would have been obvious to one ordinarily skilled in the art at the time of the invention to have the aperture 21 of '178 to be axially aligned with the hollow space defined by the filter element 5 as in Miskiewicz in order to be compatible with the uses thereof.

### Response to Arguments

7. Applicant's arguments, filed 2-13-2006, with respect to the claims have been fully considered and are persuasive. Therefore, the final rejection made by the prior examiner has been withdrawn. However, upon further consideration, new grounds of rejection are made (see above).

Art Unit: 1723

#### 8. Contact Information:

- Examiner Mr. Terry K. Cecil can be reached at (571) 272-1138 at the Carlisle campus in Alexandria, Virginia for any inquiries concerning this communication or earlier communications from the examiner. Note that the examiner is on the increased flextime schedule but can normally be found in the office during the hours of 8:30a to 4:30p, on at least four days during the week M-F.
- Wanda Walker, the examiner's supervisor, can be reached at (571) 272-1151 if attempts to reach the examiner are unsuccessful.
- The Fax number for this art unit for official faxes is (571) 273-8300.
- Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
